

William F. Maher

PARTNER AND GENERAL COUNSEL

Office Washington DC

Contact E: wmaher@wbklaw.com

P: 202.383.3382

F: 202.783.5851

Bill helps clients through the maze of federal, state and international telecommunications regulations. He has broad experience with wireline and wireless communications technologies including internet-based broadband, voice, and content delivery services. Bill represents companies before the FCC, other federal agencies, and the courts. He counsels clients on the communications regulatory implications of deals, ranging from mergers and acquisitions to new business ventures. He has a special interest in helping communications companies comply with rules for making products accessible to people with disabilities.

Bill started on the technical side of the communications business as a research engineer at Bell Labs. He later moved to the FCC where, from 2002 to 2004, he was Chief of the FCC's Wireline Competition Bureau, overseeing the development of U.S. policies on Internet service, universal service, and net neutrality. He also served in the National Telecommunications and Information Administration, developing policy recommendations on radio spectrum management and U.S. information infrastructure. Bill uses his government and technical experience so that clients meet their regulatory goals.
